

# ACTIVIST<sup>®</sup>

225 VERIPHY<sup>®</sup> SL INSECTICIDE

## Control a wide range of insects

- ▶ Includes new VeripHy<sup>®</sup> technology
- ▶ Australian owned and manufactured
- ▶ Knockdown effect (systemic with contact and stomach action)

## Activist® VeripHy® Benefits

**Well-known active** - Containing 225g/L of methomyl, Activist® VeripHy® delivers outstanding performance against a wide range of insect pests in various cropping situations.

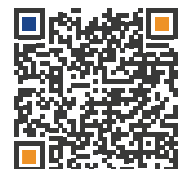

**pH indicator (VeripHy®)** - VeripHy® forewarns when there may be a problem caused by water pH or active chemical degradation and equally provides surety when there is not. If a purple colouring is exhibited, this signals that the spray solution is alkaline (pH > 7). To counter the threat of alkaline hydrolysis, the pH of the spray tank contents must be lowered. This can be achieved through the addition of Imtrade Pro 700 or other acidifying agents.

**Broadly registered use** - Treats an extensive range of key pests, including worms/caterpillars; moths; bugs/beetles; thrips; borer; flies; aphid, midge, loopers, leafhopper and ants.

**Note:** Activist® VeripHy® 225 SL is a water miscible liquid to be dissolved in water for spray application. **ALWAYS** add a non-ionic agricultural wetting agent at a rate of 0.025% of active material. This is 25 mL/100L for most wetting agents. It is most effective when spray schedules are initiated on young insects. The lower rates are used on small larvae and light infestations, the higher rates on larger larvae and heavy infestations.
