

IMTRADE
MOTTO[®]
RMR[®] MITICIDE

Versatile miticide for long-term crop protection and sustainability

- ▶ Excellent knockdown control
- ▶ Covers a wide range of cotton and fruit crops
- ▶ Proven IPM-friendly active ingredient
- ▶ Enhanced by the power of PBO

Motto[®] RMR[®] Miticide

Motto[®] RMR[®] by Imtrade CropScience is a powerful miticide that utilises a safe and efficient synergist, which is highly effective on the Two-spotted Mite, Bean Spider Mite, Oriental Spider Mite, and European Red Mite, significantly reducing their ability to break down Motto[®] RMR[®]'s active ingredient.

Motto[®] RMR[®] contains 110g/L of Etoxazole, a group 10b miticide. A non-systemic active, Etoxazole is an insect growth regulator that affects chitin polymerisation. It hinders insects from maturing and reproducing through translaminar activity by interfering with the synthesis of the exoskeleton whilst also sterilising female mites, making it an effective control method throughout the development stages. It also disrupts the formation and deposition of cuticles and lipid biosynthesis.

Motto[®] RMR[®] is an excellent investment for cotton, tomatoes, oranges, apples, nectarines, and almonds. Adopting this game-changing miticide is a key way to achieve long-term pest control and maintain the sustainability of crop production.

Synergy

Motto[®] RMR[®] contains 110g/L of Piperonyl Butoxide (PBO), enhancing Motto's[®] efficacy and assisting in resistance management tactics of target organisms. It works by blocking the production of mixed-function oxidase enzymes, affecting the metabolism of active ingredients like Etoxazole.

Rotating pesticides remains essential for optimal resistance management.

Benefits

- **Rotational Option:** Incorporating a different mode of action other than Abamectin and Diafenthiuron can benefit a rotational strategy. Motto[®] RMR[®] can be applied early or late in the cropping cycle across multiple crops, making it a versatile tool.
- **Excellent Lockdown Control:** Motto[®] RMR[®] disrupts mites' reproductive capabilities.
- **IPM Friendly:** Motto[®] RMR[®] is soft on beneficials and is recommended to be used with biological control strategies.
- **Low Toxicity and Environmental Impact:** Translaminar movement is a safe and efficient way to target mites that consume the undersides of leaves, with minimal environmental impact and low toxicity levels to humans.
